

CLAIMS

We Claim:

- 5 1. A computer-implemented method for presenting a user interface for construction of an executable sequence to automate a decision-making process based on a collection of data, the method comprising:
- displaying representations of a plurality of discrete executable directives encapsulating logic associated with the decision-making process, wherein at least
- 10 one of the discrete executable directives defines a query against the collection of data, at least one of the discrete executable directives defines an analysis directive to analyze information derived from the query, and at least one of the discrete executable directives defines a distribution directive to distribute information based on the analysis; and
- 15 accepting user input to assemble a set of the discrete executable directives into an executable sequence.
2. A computer-readable medium comprising computer-executable instructions for performing the method of claim 1.
- 20 3. The method of claim 1 wherein the executable sequence is operable to distribute results of interim processing.
4. The method of claim 1 wherein the executable sequence is operable
- 25 to generate a targeted personal notification.

T060303-030901

5. The method of claim 1 wherein the executable sequence is operable to distribute a presentation of information comprising displayed elements, wherein a recipient of the presentation of information can drill down to detail not shown in the presentation by activating one of the displayed elements.

5

6. The method of claim 1 wherein the analysis directive comprises a filter.

7. The method of claim 1 wherein the analysis directive comprises arbitrary executable code entered at sequence definition time.

10

8. The method of claim 1 wherein at least one of the analysis directives is operable to analyze a user's reaction to information distributed by at least one of the distribution directives.

15

9. The method of claim 1 wherein at least one of the analysis directives is operable to determine whether a user acknowledged information distributed by at least one of the distribution directives.

20

10. The method of claim 1 wherein at least one of the analysis directives is operable to determine whether a user concurred with an identification of a root cause of a problem in information distributed by at least one of the distribution directives.

25

11. The method of claim 1 wherein at least one of the analysis directives is operable to present a recommended course of action to resolve a problem.

TOP SECRET

12. The method of claim 1 wherein at least one of the analysis directives is operable to determine whether a user complied with a recommended course of action to resolve a problem.

5 13. The method of claim 1 wherein the directives encapsulate their respective logic.

14. The method of claim 1 wherein at least one distribution directive is operable to distribute information to a wireless device.

10

15. The method of claim 1 wherein at least one distribution directive is operable to distribute information via email.

15

16. The method of claim 1 wherein at least one distribution directive is operable to distribute information via a web page.

17. The method of claim 1 wherein the sequence comprises at least one gate.

20

18. The method of claim 1 wherein lineage of the sequence is tracked to indicate one or more sequences on which the sequence is based.

19. The method of claim 1 wherein at least one of the directives is pluggable.

25

20. The method of claim 1 further comprising:
executing the sequence, wherein during execution of the sequence,
responsive to detecting a plurality of inputs to an analysis directive, instantiating
multiple instances of the analysis directive for accepting the inputs.

21. A computer-implemented method of presenting a user interface for creating executable sequences from processing directives, the method comprising:

- presenting a first display area comprising graphical representations of
5 available processing directives, wherein the processing directives comprise query directives, analysis directives, and distribution directives;
presenting a second display area comprising graphical representations of processing directives selected as included in the executable sequence;
depicting coupled processing directives as graphically linked and
10 conditionally coupled processing directives as graphically linked with a depiction of a condition associated with the link;
accepting a drag and drop operation to drop a processing directive from the first display area into the second display area; and
responsive to the drag and drop operation, adding the processing directive to
15 the sequence.

22. A computer-implemented method of defining query-based processing to be performed for a collection of data, the method comprising:

- selecting a plurality of processing directives, wherein the processing
20 directives are operable to generate, process, and distribute information from the collection of data, at least one of the processing directives is a query, and at least one of the processing directives is a template;
associating the processing directives and the parameters into an executable sequence; and
25 specifying parameters for binding to the template to be used when the processing directives are executed.

23. The method of claim 22 wherein at least one of the processing directives is a template selected from a menu.

24. The method of claim 22 wherein each of the processing directives is selected from a menu.

5 25. The method of claim 22 further comprising:
specifying one or more destinations for the results of the processing
directives; and
associating the destinations with the executable sequence.

10 26. The method of claim 22 further comprising:
accepting scheduling information indicating when the executable sequence is
to be periodically executed; and
periodically executing the sequence according to the scheduling information.

15 27. A method of selectively distributing information from a data
warehouse, the method comprising:
accepting a set of queries to be periodically run against the data warehouse,
wherein the queries generate result sets;
accepting a set of filters to selectively identify result sets of interest out of
20 the result set generated from the queries;
accepting a set of distribution instructions indicating how the result sets of
interest are to be distributed.

25 28. The method of claim 27 wherein at least one query out of the set of
queries, at least one filter out of the set of filters and associated with the query, and
at least one distribution instruction out of the set of distribution instructions and
associated with the filter are combinable into a configurable unit.

05925103-080901
T05090-0015250

29. The method of claim 28 wherein the configurable unit is sharable among a plurality of users.

30. The method of claim 27 further comprising:
5 accepting an indicating that the configurable unit is to be posted for sharing by other users.

31. The method of claim 28 wherein the configurable unit comprises a plurality of filters to be run in succession.

10

32. The method of claim 27 further comprising:
accepting an indicating that one of the queries is to be posted for sharing by other users.

15

33. A computer-based system for presenting a user interface for construction of an executable sequence to automate a decision-making process based on a collection of data, the system comprising:

a user interface element for accepting user input to configure a plurality of discrete executable directives encapsulating logic associated with the decision-making process, wherein at least one of the discrete executable directives defines a query against the collection of data, at least one of the discrete executable directives defines an analysis directive to analyze information derived from the query, and at least one of the discrete executable directives defines a distribution directive to distribute information based on the analysis; and
20 a user interface element for associating the plurality of discrete executable directives into an executable sequence.

25

34. The system of claim 33 further comprising:
a repository for storing configuration of the executable sequence.

35. The system of claim 34 further comprising:
a sequence executer operable to access the repository and execute the
sequence.

5

36. A computer user interface for entering a combined unit of querying,
filtering, and distribution, the user interface comprising:

means for entering a series of steps, wherein at least one of the steps is a
query, at least one of the steps is a filter for filtering results generated based on the
10 query, and at least one of the steps is a distribution directive indicating how the
filtered results are to be distributed; and
means for scheduling the steps for automatic periodic execution.

37. A computer user interface for defining query-based processing to be
15 performed on a collection of data, the system comprising:

a presentation of available processing directives for generating information
from the collection of data, wherein at least one of the processing directives is a
query, at least one of the processing directives is a template, and a plurality of
processing directives can be selected;

20 a presentation for accepting one or more parameters to be bound to the
template; and

a presentation for naming the processing directives and the parameters as an
executable sequence.

T06080" 0752660

38. A computer user interface for designating an executable sequence for providing an analysis of a collection of data, the computer user interface comprising:

- 5 a presentation of a list of queries, from which a user can select one or more queries to be added to the sequence;
- a presentation of a list of analysis directives, from which a user can select one or more analysis directives to be added to the sequence to be performed on the results of the selected queries to generate analysis results; and
- 10 a presentation of a list of distribution directives, from which a user can select one or more distribution directives to be added to the sequence and specifying how the analysis results are to be distributed.

39. The computer user interface of claim 38 further comprising:

- 15 a presentation of scheduling options by which a user can schedule the executable sequence for periodic execution.

40. A computer-readable medium for storing an executable sequence for execution by a computer system to perform query-based processing on a collection
20 of data, the sequence comprising:

- information indicating a plurality of processing directives for generating information from the collection of data, wherein at least one of the processing directives is a query, at least one of the processing directives is a template, and a plurality of processing directives can be selected; and
- 25 information indicating one or more parameters to be bound to the template.
